Claims 7-10,12-15, 17-20 and 26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The output circuit detail of claims 7, 12 and 17 can only be read on the embodiment of figure 6; however, the last paragraph of the associated independent claim 6,11 or 16 respectively describes a gain boost amplifier with interconnections that cannot be read on the embodiment of figure 6. Regarding claim 26, this claim can only be read on the right side of fig. 5B; however, in this reading the fifth transistor claimed would have to be read on transistor 33; the claim calls for the drain of this transistor to be coupled to the input terminal. However, in fig. 5B the input to this circuit section is at the source of cascode transistor 10.

Claims 6,11,16 and 23-25 are allowed.

The claimed interconnections of the gain boost amp are not disclosed in the context claimed in the prior art of record.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The applicant is familiar with the gain boost amplifiers of the folded cascode differential amplifiers of Ivanov and Ivanov et al.; note also that of fig. 5 of Leung, fig. 7 of Navabi et al. and fig. 2 of van Rhijn.
